

18. The output from a signal generator is connected to an oscilloscope. The trace seen on the oscilloscope screen is shown.

The Y-gain setting on the oscilloscope is 2.0 V/div.

The time base setting on the oscilloscope is 5 ms/div.

Which row in the table gives the rms voltage and the frequency of the output from the signal generator?

	rms voltage (V)	Frequency (Hz)
A	4.2	25
B	4.2	40
C	6.0	40
D	6.0	200
E	8.5	25
